"Identification of non-heme diiron proteins that catalyze triple bond and epoxy group formation.";
Science 280:915-918(1998).
-!- FUNCTION: Changes the delta-12 double bond of linoleic acid into a triple bond in the bionymthesis of crepenynic acid.
-!- CATALYTIC ACTIVITY: Linoleate + AH(2) + O(2) = crepenynate + A +

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                               96473596

/note="Vector: pBRcDNASfiAB; The standard library was
constructed from multiple sources of RNA from a single
genotype. cDNAs were then size-fractionated, directionally
cloned into a custom medium-copy vector and
transformations made with three size classes
(X-large, Y-medium and Z-small) to minimize size bias due
to differential transformation efficiency. Details of
each source of RNA and library construction can be
obtained at http://cgpdb.ucdavis.edu/"

genotype. CDNAs were then size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with three size classes (X-large,Y-medium and Z-small) to minimize size bias due to differential transformation efficiancy. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAAGGAGCCTTGACCACAATCGACAGAGATTTCGGTCTCCTGAATCGGGTTTTCCACGAC 1009

/clone lib="CLV(XXZ) lettuce virosa"
/note="Vector: pBRcDNASfiAB; The standard library was
constructed from multiple sources of RNA from a single
genotype. cDNAs were then size-fractionated, directionally
cloned into a custom medium-copy vector and
transformations made with three size classes
(X-large,Y-medium and Z-small) to minimize size bias due
to differential transformation efficiency. Details of
each source of RNA and library construction can be
obtained at http://cgpdb.ucdavis.edu/"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         167

constructed from multiple sources of RNA from a single genotype. CDNAs were then size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with three size classes (X-large, Y-medium and Z-small) to minimize size bias due to differential transformation efficiency. Details of each source of RNA, and library construction can be

/note="Vector: pBRcDNASfiAB; The standard library was
constructed from multiple sources of RNA from a single
genotype. cDNAs were then size-fractionated, directionally
cloned into a custom medium-copy vector and
transformations made with three size classes
(X:large,Y-medium and Z-small) to minimize size bias due
to differential transformation efficiency. Details of
each source of RNA and library construction can be
obtained at http://cgpdb.ucdavis.edu/"

/notes_tropy backgraphs, the standard library was constructed from multiple sources of RNA from a single sources of RNA from a single spencype. CDNAs were then size fractionated, directionally cloned into a custom medium-copy vector and transformations made with three size classes (X-large, Y-medium and Z-small) to minimize size bias due to differential transformation efficiency. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/"

/note="Vector: pBRcDNASfiAB; The standard library was constructed from multiple sources of RNA from a single genotype. CDNAS were then size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with three size classes
(X-large, Y-medium and Z-small) to minimize size bias due to differential transformation efficiency. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      169
